

FIRE CABLE IDENTITY DETECTION SYSTEM

HAVE YOUR CONTRACTOR NAME, CABLE WARNING & PROJECT NUMBER PRINTED ON YOUR FIRE CABLE!

The installation of the wrong Fire Cable type, substandard, non compliant or counterfeit Fire Cables can pose a threat to life safety with consequential costs & problems shared by project contractors and consultants.

What does the CID System offer?

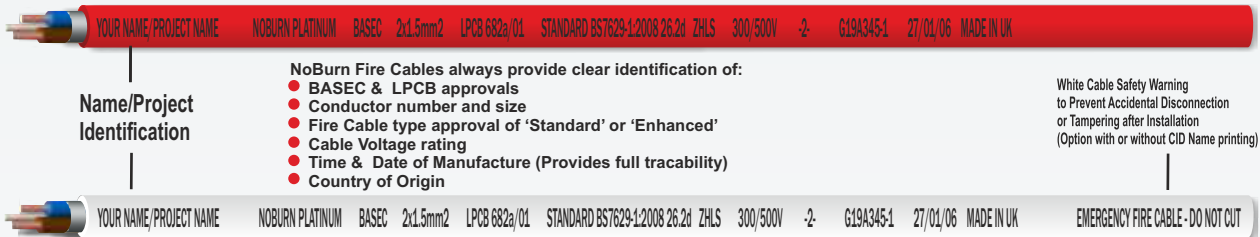

Ventcroft's unique 'CID' (Cable Identity Detection) can stop the intentional or accidental installation of non compliant and sub standard fire cables. CID also makes it quick and simple, even for the untrained, to check for any variation from fire cable specified for a project. The cable's identification will also deter the theft of fire cable from a site for it's criminal use elsewhere.

How does the CID System work?

Nothing technical, nothing costly – Your CID details will be printed every metre along the entire length of every reel of fire cable. A commitment to just 10km of any one type and colour of fire cable enables a contractor to have their Company/Project Cable identification provided free of charge.

What are the benefits of using the CID System?

By having your fire cable printed, it will provide life time traceability of the cable you purchased, CID can help ensure your customers satisfaction that the cable they specified was installed as agreed and the additional assurance that every reel of fire cable is certified and genuine.

Note: Text example is not to scale

No other manufacturer offers this system or service!

Features
