DISABLED PERSONS ALARM

VEN No's - Explained - To make it easy to determine the maximum number of accessories that can be powered by the control panel's built in power supply we have allocated a 'VEN No' (Voltage Equivalent No') to each product. The control panel can provide power to a maximum total of **20 VEN**. A system and its content already have a **VEN** amount and this must be included in the maximum.

e.g. A Premier System = **5 VEN** so if you add, x1 Pull Cord (VPA-PC) which is **1 VEN** and x1 Over Door Indicator (VPA-ODI) which is equal to **3 VEN**, the total equals **9 VEN** therefore accessories totalling up to a further **11 VEN** can be added.

Accessories

Plastic Ceiling Call Unit

Features

Complete Surface Mount Pull Cord Call Device with:-

- Buzzer (Sounder can be Isolated)
- Strong Cord Actuator
- Simple two wire installation
- Activated Indicator LED

Re-order code: **VPA-PC:**
DPA Pull Cord (plastic)

VEN No: 1
